

Data & AI

JPMorganChase's data and AI ecosystem spans centralized platforms and federated teams that embed with businesses to deliver outcomes at scale. The Chief Data & Analytics Office (CDAO) sets firmwide strategy, governance, risk controls, and tooling for data and AI—covering data management and quality, model risk policies and review frameworks, and platform products like LLM Suite for secure AI assistance, analytics, and automation across lines of business.

Embedded Data & AI teams within each business (e.g., payments, consumer banking, markets) deliver end to end solutions using approved tools: they engineer data, build and deploy models, and monitor them in production to solve real problems such as fraud detection, credit risk, trading and liquidity optimization, customer personalization, and operational efficiency. Opportunities span data management, analytics and AI/ML—working with large datasets, feature pipelines, and production systems alongside product and tech partners.
